NIRAJ DILIP CHAVAN

SENIOR SOFTWARE ENGINEER · FRONTEND-LED FULL-STACK · FINTECH & TRAVEL PLATFORMS

nirajd327@gmail.com · +91 96071 95436 · linkedin.com/in/niraj-chavan-8267bb98 · devnirajc.github.io/niraj-chavan · Pune, India

SUMMARY

Senior Software Engineer with 12+ years building large-scale frontend systems for fintech, travel and enterprise platforms. Currently a Software Development Engineer III at JP Morgan Chase, leading the front end of the promotions and offers platform on Chase Travel. Strong in Angular, React, TypeScript and Node.js, with a record of technical leadership: mentoring engineers, leading cross-team design reviews, and building reusable component libraries adopted across squads. Expanding backend depth in microservices, cloud deployment and AI-assisted development.

EXPERIENCE

Software Development Engineer III · JP Morgan Chase & Co.

DEC 2021 – PRESENT · PUNE

Chase Travel — Promotions, Offers & Purchase Flow | Angular · TypeScript · Micro-frontends

- Lead Developer for the promotions and offers platform. Delivered personalised offer rendering across Chase Travel.
- Architected a reusable Angular component library for promotion rendering, adopted by 3 downstream squads, so they render promotions with one shared library instead of building their own.
- Introduced micro-frontend module boundaries using Webpack Module Federation, enabling independent deployments across 4 squads and removing cross-team release coordination bottlenecks.
- Worked on the purchase flow, from trip cart and traveller information through payment and review to booking confirmation.
- Led the WCAG 2.1 AA accessibility compliance audit and remediation across the Travel platform: keyboard navigation, ARIA landmarks and screen-reader support.
- Conduct weekly design and code reviews for my team and lead cross-team design reviews; mentored 2 junior engineers on TypeScript best practices and Angular component architecture.

Site Manager — Travel Settings Customisation | Angular · RBAC · REST APIs · Performance profiling

- Led the design and implementation of Site Manager, a self-service settings platform: business teams change travel product settings without engineering involvement, and changes take effect immediately instead of waiting days for a release.
- Worked on Site Manager's micro-app registry, so each of Chase Travel's micro-apps can be loaded independently.
- Designed and implemented role-based access control scoping configuration permissions per business unit. The Angular layer shows each role only what it may change, and the APIs enforce the same entitlements.
- Drove a performance audit using application monitoring, log analysis and browser profiling; fixed 3 rendering bottlenecks, so the settings dashboard loads and responds noticeably faster.

UI Developer · Schlumberger

SEP 2019 – DEC 2021 · PUNE

Field Logistics Module | Angular · TypeScript · Jasmine/Karma · WebDriver · Kibana

- Developed FLM, the application managing global logistics inventory for field operations, used by 500+ engineers across multiple geographies.
- Built a real-time inventory tracking dashboard with Kibana-integrated data feeds, reducing inventory discrepancies by ~35% within one quarter of go-live.
- Achieved ~80% unit test coverage (Jasmine/Karma) and a full E2E test suite (WebDriver/Allure), reducing the QA regression cycle from 3 days to under 6 hours.
- Led the Angular v8 to v11 upgrade: planned the migration, coordinated with QA, and rolled out with zero production downtime.

Internal projects | React · Node.js · Express

- Planned an internal application's migration from Angular to React: set up the React app (build tooling, routing, state), rebuilt its screens, and ran both side by side until the React version went live in production.
- Built an internal API with Node.js and Express.

Senior UI Engineer · Xpanxion International (UST Global)

JAN 2017 – SEP 2019 · PUNE

Scope Retail — Order Management System | Angular · Chart.js · REST APIs

- Designed and built the full UI for inventory oversight and order management; manual data-entry errors fell by 50% over three months post-launch.

- Built real-time dashboards for inventory and order monitoring, adopted by the operations team as their primary daily tool, replacing manual spreadsheet tracking.
- Mentored 2 junior engineers on Angular architecture, component composition and REST API integration patterns.

K7 Computing — Consumer Console & Antivirus Dashboard | Angular · TypeScript · RxJS

- Built the front end of K7's consumer console and antivirus dashboard, used by thousands of home users.

Holland America Line — Cruise Booking Site

- Built cruise search and booking screens and shared components; sped up photo-heavy pages with lazy loading, code splitting, image optimisation and smaller bundles.

Frontend Developer · Connect 91 Web Solutions (Polyscripts Infotech)

DEC 2015 – JAN 2017 · PUNE

- Built an interactive in-video banner system for live product demos on a video SDK, for desktop and mobile playback.
- Built a Sass architecture with reusable component patterns for large e-commerce front ends, and converted PSD and Sketch designs into semantic, accessible HTML5 and CSS3.

Software Developer · Whitecode IT Solutions Pvt. Ltd.

JUL 2014 – DEC 2015 · PUNE

- Built an end-to-end Plot Booking System that replaced a paper-based reservation process, from requirements to production.
- Built e-commerce applications on CodeIgniter and Laravel with cart and payment-gateway integration, and custom WordPress themes and plugins.

PROJECTS

Rxbit — Prescription Builder | React · Vite · IndexedDB (Dexie) · Zod · PWA

- Prescription builder for doctors with patient history, allergy flags, a drug library and interaction warnings; local-first, keyboard-navigable (WCAG 2.1), with PDF export. Live: rxbit.vercel.app

ShredTrack — Calorie & Macro Tracker | Next.js · React · IndexedDB (Dexie) · PWA

- Tracks daily calories, protein, carbs and fat against personal targets, with a food log by meal, workout logging and an AI meal planner; installable, with on-device storage. Live: shred-track-livid.vercel.app

Nexpenso — Personal Finance Tracker | React · Redux · Vite · Node.js · Express · PostgreSQL · Docker

- Imports bank statements as cancellable background jobs, detects duplicate UTR and UPI references and categorises spending with AI-assisted rules; Node.js and Express API on PostgreSQL, deployed via GitHub Actions. Live: nexpenso.netlify.app

SKILLS

Frontend: Angular · React · Next.js · TypeScript · JavaScript · RxJS · HTML5 · CSS3/SCSS · Tailwind CSS

Architecture: Micro-frontends (Webpack Module Federation) · Component libraries · Role-based access control · WCAG accessibility · Performance optimisation (Core Web Vitals)

State & data: Redux / Redux Toolkit · REST APIs · GraphQL · React Query

Backend & cloud: Node.js · Express · MongoDB · PostgreSQL · Microservices · Docker · Kubernetes · AWS · Azure

Testing: Jest · React Testing Library · Jasmine/Karma · WebDriver · Cypress · Playwright · Allure

Tooling: Webpack · Vite · Git · GitHub Actions (CI/CD) · Dynatrace · Kibana · Grafana · Jira · Figma · GitHub Copilot

Practices: Technical leadership · Code review & mentoring · Agile/Scrum · Design patterns · Frontend system design

Familiar with: MySQL

EDUCATION & CERTIFICATION

B.E. Computer Engineering · Dr. D. Y. Patil Institute of Engineering & Technology, Pune University · 2011–2014 · 63.89%

Diploma in Computer Engineering · Y. B. Patil Polytechnic, MSBTE, Pune · 2008–2011 · 83.03%

AWS Certified Cloud Practitioner · Amazon Web Services · Issued Dec 2023 · Recertified Nov 2026 · Expires Nov 2029 · Credly badge

Languages: English · Hindi · Marathi
